Automaton3D can be installed on Windows, Linux and MacOS. In Linux, use a GUI version that can be installed through the Package manager (Synaptic, Adept, ...), or use automaton3d.py and automaton3d -l. Automaton3D takes two main parameters to be defined: 1. The unit of measure of the model; 2. The degree of granularity. Unit of Measure (Unit) The unit of measure, also called the granularity, defines the size of the elements in the model. As an example, the unit can be the millimeter, the centimeter, the meter, or any other dimension, or a specific value, such as the diameter of a sphere, the length of the radius of a sphere, ... For the use of the unit of measure, the following units are available: \* m, m^2, m^3, m^4, m^5, m^6, ... \* mm, mm^2, mm^3, mm^4, mm^5, mm^6, ... \* cm, cm^2, cm^3, cm^4, cm^5, cm^6, ... \* m, m^2, m^3, m^4, m^5, m^6, ... \* mm, mm^2, mm^3, mm^4, mm^5, mm^6, ... \* cm, cm^2, cm^3, cm^4, cm^5, cm^6, ... \* mm, mm^2, mm^3, mm^4, mm^5, mm^6, ... \* cm, cm^2, cm^3, cm^4, cm^5, cm^6, ... \* m, m^2, m^3, m^4, m^5, m^6, ... \* mm, mm^2, mm^3, mm^4, mm^5, mm^6, ... \* cm, cm^2, cm^3, cm^4, cm^5, cm^6, ... \* mm, mm^2, mm^3, 81e310abff

## Automaton3D Quantum Laboratory

Small 1D and 2D automata for classroom, laboratory, and informal education. Individual programming and interactive creation of automatic movement of automata. Customizable movement: direction, speed, rotational speed and acceleration. Suspension of movement. Suspension of automata (as a piece of laboratory equipment). Programming and presentation of automata by means of a simple interface. Generation of the automaton automatically. Random sequence of movements of a single sphere. Random sequence of movements of automata with spheres. Colors, reflections, and other effects... Also has a web interface that is suitable for organizing networks. Currently has an addition for 2D automata. Features Automata of the type: 1D 2D Planned release Autumn 2018 Planned features - 2D automata - Reactive automata - Automatic programming of the movement of the automata - Energy - Energy and power saved - Energy and power consumption - Signals - Customizable amplitude of the signals - Duration of the signals - Distance - Time - Speed - Position - Impact of the impact on the automata and its particles - Suspension - Random sequence of movements of the automata - Simulation - Programming of the animation in real time (tool with the functions of the rete) - Outputs, graphs and statistics The idea The idea of the creation of an environment for the study of automata was born in the theoretical and practical laboratory of the school, where many students have their first contact with the automata. We are trying to create a kind of a laboratory where the movement of automata is taken by students as an independent project, and in which the creation of automata, with or without the participation of children, is a real opportunity, because it becomes a challenge for creative thinking and academic achievement. In addition to the scientific research project, with the intention of developing the young ones as creators, the creator of automata wishes to develop the student's abilities to achieve (design, creation, and programming) and to become creators, artists, and humanists. The idea of automata as a laboratory tool, as a

Sphere properties can be viewed and customized, the dynamic movement of a sphere and its children can be observed to analyze the impact on the automaton and its particles. It is available on the web under At the moment of publication, the image with a snapshot of the latest version is available as well. Automaton3D Quantum Laboratory is under constant development. Some components of the framework were incorporated into the newly developed version 2. Version 2 also has some new and exciting features and innovations. The interface has been greatly improved and expanded, and it is now a more usable application. The project plan is to develop automaton3D further, and as always, any suggestion for improvement is welcomed. If you find bugs, have some suggestion or need new features, you can contact with me. There is also a forum where you can interact with other users and discuss the automaton3D and other issues with others.
