Adobe Photoshop is the business standard for image editing. Almost everyone on the Internet uses it to manipulate or color their photos, and Photoshop's features are frequently taught to beginning users. This article is a beginners guide for editing photos with Photoshop.

1. How to Open a Photo in Photoshop CS6 To open a photo in Photoshop, go to File > Open, then navigate to the file you want to open. You can also go to File > Automatically Open, and then select the file you want to open. If your Photoshop image opens in black-and-white, the file may be RGB, which indicates you haven't set your colors. To edit your image colors, click the "Color Picker" button at the top of the interface. Then navigate to the screen that lets you choose your image's color.
2. How to Select a Layer in Photoshop CS6 To select a layer to edit, click the paintbrush icon at the bottom of the Layers panel. (You can also select a layer by pressing the "L" key.
3. How to Delete a Layer in Photoshop CS6 To delete a layer, drag it off the canvas. You can also select a layer by pressing the "Delete" key on your keyboard. If you later find that you need the layer, or if you want to replace it with a different one, you can select it using a brush.
4. How to Merge Layers Together in Photoshop CS6 To merge two or more layers together, click the group icon in the layers panel. Photoshop opens a new panel, which displays all of the layers that are below the one you're working on. A yellow line indicates which layer will show through the other layers. To change that, drag a yellow box on the canvas around the layer you want to show. Click the box to select the area you want to show through, then click "OK."
5. How to Rotate an Object in Photoshop CS6 To rotate an object, go to the Layers panel and click the icon that looks like a three-branch tree. Once the Layers panel is open, you can click the yellow box that represents the layer you want to rotate. When the layer is selected, a blue arrow points to a green button that says "Rotate Layer." Click that button and the object will be rotated. To rotate an object when its layer is not

With the power to supply their own data, digital age students could see a higher graduate rate. They will struggle to compete with digital natives, who have the power to supply their own data. A revolution in education is underway as teachers are rethinking everything from how work is assessed to what is taught and how to deliver it. Despite attempts to lure more students into university by sprucing up the curriculum and offering them courses, the National Participation Project (NPP) and other groups are trying to introduce students to 21st-century skills and culture. But traditional classroom teaching is waning and replacing it are a range of online courses, interactive simulators, gamification and different models of teaching. The government is encouraging this shift. It is said that by 2025 the majority of students will be taking a university degree online and that by 2030, 50% of students will be on a full-time course. Students using universities' information systems such as Plunkett colleges' Campus Courier or learning management systems (LMS) such as Moodle and Blackboard are already supplied with a wealth of data. As more students sign up to MOOCs (massive open online courses), which are free and delivered online, some universities are creating their own MOOC courses, such as the course on teaching with Data Thinking, which Queen's University Belfast launched this year. Some have already seen benefits. The University of Edinburgh's School of Engineering and the Information School have piloted the first ever MOOCs in climate change science, attracting 26 students to the course in September 2013. This number increased to 120 and is still rising. It has led to the establishment of a new curriculum called Data Driven Thinking, which has been developed to encourage students to use data to solve problems in a range of subjects, from engineering to medicine. This year, the universities are hosting the first ever UK MOOC Conference, which is the first time that representatives from across the sector will meet to discuss the use of MOOCs and discuss the future of MOOCs. Andrew Whareford is a postgraduate student at the University of Edinburgh's School of Engineering. He said: "MOOCs and other similar courses can be really effective in enhancing the education experience. "As a course on Software Engineering, you would have no other resource than the module you are currently doing. Having no access to any other material,

Successful treatment of a hypertrophic pyloric stenosis after anticoagulation therapy. Anticoagulation therapy is usually the first line treatment for a patient with a hypercoagulable state. This patient had a hypertrophic pyloric stenosis that required surgery but could not undergo an elective procedure. The status of the coagulation profile and the medical records were reviewed. The patient developed pulmonary embolism after therapy was started. Subsequently, he underwent an uncomplicated pyloromyotomy. Surgery was performed successfully in a hypercoagulable patient who presented with a hypertrophic pyloric stenosis.

The Iranian government has said that, by the end of 2017, it will have a total of 30 million barrels of proven oil reserves, which could give a much-needed fillip to its moribund oil industry. Backed by the government's plan to develop northern, central and southern areas, the upstream oil and gas industry could generate an additional 5 billion barrels a year, said Zarrabian. "Fars Investment Assurance Co, which seeks to advise investors on Iran's oil and gas sector, has raised the country's oil reserve estimate to 10.3 million barrels from 8.8 million barrels previously," the Tehran-based financial analyst said. "The country could also increase its oil production to 5.9 million barrels a day from 5.8 million barrels in 2016. "Iran's oil industry needs a lot of help. Many of the core oil and gas projects have been delayed due to sanctions and the Iranian government has struggled to make more production due to lack of finances," the analyst added. Iran's oil export capacity will rise from 1.5 million barrels a day currently to 2.6 million barrels a day in 2018 and 2.8 million barrels a day in 2019, he added. Iran will also boost its natural gas output from around 3.2 million barrels a day currently to 5.5 million barrels a day in 2018 and up to 7.1 million barrels in 2019, Zarrabian said. To supply these sectors, new, modern oil pipelines are vital. "Iran has not yet developed its
